VedAroma

100 % Pure Certified Organic

Why Choose VedAroma

Aromatherapy is one of the most popular complementary therapies. The effectiveness of essential oils depends on the purity of the oils. When the oils are completely pure, produced without the use of chemicals and not combined with any synthetic products, the energy, aroma, and benefits of the oils are greatly enhanced.

Highest Quality Organic Standards

Highest quality is assured when oils are produced according to organic standards. Even though the demand for organic quality essential oils is growing, they have been difficult to obtain for a number of reasons.

Producing pure organic essential oils requires more time and involves greater risks, so this is only practised by a relatively few small family enterprises.

Slow Distillation at Lower Temperatures

The distillation process is also crucial to the quality of the oils. If an essential oil is distilled too quickly (at high pressure, high temperature), many of its precious elements are lost. In the organic process, slow distillation at lower temperatures ensures the maximum retention of active components in the oils, which means maximum quality in terms of fragrance and benefit for our overall well-being.

VedAroma Brings You the Healing Power

Certified Organic by ECO Control/NCS Organic Standard

Aroma[®]

or Wild Harvested Essential Oils

Aroma Essential Oils?

Exceptional Purity and Highest Quality

VedAroma offers an outstanding selection of certified organic or wild harvested essential oils, exceptional in their purity and high quality. They are derived from plants that are grown without the use of chemical fertilizers, herbicides, pesticides or fungicides, and they are distilled slowly and under low pressure to ensure maximum potency and effectiveness.

Certified Organic and Wild Harvested

Some of our essential oils are wild harvested, which means derived from wild-grown plants that have not undergone chemical treatment and have been harvested and distilled according to certified organic regulations (e.g., Eucalyptus, Tea Tree, Siberian Pine, etc.).

Absolutes

Some plants are not suited to the distillation process because they lose aroma, properties, or yield. In these cases, the plant material may be processed by solvent extraction. The final product from this process is known as an Absolute.
